

Quality, Environment and Safety Policy

The General Management of BIBETECH is committed to a process of implementation of Quality and Environment and Safety Management at every company level, in compliance with the requirements of the ISO 9001, ISO 14001 and ISO 45001 standards.

The main objectives are:

- Recognition by customers as preferred suppliers of the sector in terms of product and service;
- The continuous improvement of performance both in the management of processes and for activities that have an impact on the environment and on the health and safety of workers;
- The satisfaction of the needs and expectations of customers and all interested parties;
- Compliance with the requirements
- The prevention of pollution and the minimization of environmental impacts considering the responsibility towards the Environment as well as the needs of the company and the market;
- The involvement of its suppliers in favour of environmental protection, with particular attention to the reduction and correct delivery and disposal of the waste produced;
- Dissemination to customers and suppliers of its commitment in favour of environmental protection, also maintaining a relationship of proactive collaboration with all the supervisory authorities;
- The implementation of training programs in the field of environment and safety, aimed at raising awareness and informing each worker about the environmental aspects generated by the activities and about the health and safety risks associated with their work;
- Compliance with mandatory environmental and safety regulations;

The General Management therefore proposes to:

- Increase the prevention activity in order to reduce the costs of non-quality, environmental impacts and aspects related to health and safety in the workplace.
- Optimize management processes in order to increase the company's competitiveness and market opportunities;
- Optimize relations with suppliers in order to make them participate in the objectives set;
- Monitor customer satisfaction also for environmental and health and safety aspects through specific methods established during the Management Review;
- Optimize management processes and the management of related risks, by implementing the principles of risk based thinking;

The General Management
